

## Smart Pixel lights control system

### Smart controller Instruction

◆ For:

- **Smart controller**  
SW-201 / SW-301 / SW-301U
- **Multi-function controller**  
SY-208 / SY-302G / SY-324  
SY-328 / SY-408 / SY-418 / BL-321
- **LoRa system controller**  
LM-100 / LR-101

◆ Please read this instruction manual carefully before use

### Tips:

#### Warm notice:

1. in order to prevent fire or electric shock accident, please place the controller in Do not expose to moisture in well-ventilated areas.
2. Turn off the controller before inserting or removing a signal cable or SD card Source, so as not to burn the controller internal chip or SD card.
3. Please avoid the SD card inserted in the controller for long-distance transportation It is easy to damage the SD card and SD card holder.

### Drive Pixel Quantity

Signal	SPI (TTL)	Standard DMX512	Extend DMX512
Pixel	1024	168	336

### Controllers introduction

#### ◆ Smart controllers

## BL-321

- 1 Charging interface
- 2 Output subport port
- 3 Output Network port
- 4 TF Card slot(for Screen firmware upgrade)
- 5 Power switch
- 6 SD card slot
- 7 MicroUSB(DC5V2A)
- 8 Touch display

## LoRa controllers

### LoRa master LM-100

- 1 Power output
- 2 Power switch
- 3 LCD display
- 4 Control key
- 5 SD Card slot (upgrade only)
- 6 4G card slot
- 7 GPS module
- 8 GPS module interface
- 9 LoRa antenna
- 10 LoRa antenna interface
- 11 4G antenna
- 12 4G antenna interface

## LoRa Slaver LM-100

- 1 Power input
- 2 Output independent port
- 3 SD Card slot (upgrade only)
- 4 Power switch
- 5 Mode plus key
- 6 Mode minus keying
- 7 Nixie display
- 8 LoRa antenna interface
- 9 LoRa antenna

## Extended function

### 1.Controller cascade connection

#### Connections to output ports

### 2.GPS function

- GPS support for standard SMA interface
- Marine antenna Install the antenna in an open position
- The top is facing the sky
- Antenna spacing  $\geq 2$  meters, can be prevented
- Mutual interference

## 3.DMX console function interface

Console signal output interface description:  
 P1=GND (yellow and green lines);  
 P2=D+/A (brown line)  
 P3=D-/B (blue line),  
 the male port is the receiving end,  
 the female port is the output end;  
 Console signal output interface is for reference only,  
 the actual signal needs to be based on the final cannon head and DMX512 console shall prevail.

## 3.Remote controller

Remote control distance:  
 15 meters (without barrier)  
 Remote control function:  
 Mode selection/Speed adjustment/Scene

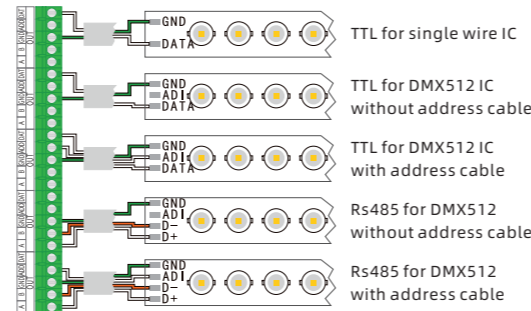

## 3.Touch control panel

Dynamic sound control  
 Lighting control  
 Network cable power supply  
 86 work bottom box installation  
 Inductive touch  
 Tempered glass panel

## Connection Instruction

### Terminal

## Right GND connection example

## Wrong GND connection example

The controller signal output GND must be directly connected to the lamp input GND, Can not be connected to the lamp through the negative switching power supply.

## Signal Amplifier Instruction

### A88、A68

#### A88 for DMX512

#### A88 for single wire IC

#### A68

## Copy File to SD card

### Way 1: Complete on software directly

Choose menu Output-SD, Click OK, then choose right SD card, Press Confirm to write \*.bin file to SD card.

### Way 2: Copy \*.bin file to SD card manually

#### Step1: Format your SD card

Options: FAT32 + 32KB  
 Notice:  
 SD card should be format every time when copy file to it.

#### Step 2: Copy \*.bin file to SD card.

## Error code instruction

E01	No SD card detected
E02	The SD card does not respond
E03	SD card has no effect file
E07	The SD card file does not match the control box
E14	effect of the LR controller exceeds upper limit memory
E15	The LR controller has no bin effect file
E18	Project points exceeded the upper limit
E20	LR series controller: The firmware file is abnormal
E21	SW/SY series: The firmware upgrade is abnormal
	IR series controller :LR initial loss purchase
E22	SW/SY series controller: The firmware file is abnormal
	LR Series controller: Memory chip initialization failed
E23	Firmware program exception
E24	Firmware upgrade failed
E25	No firmware file
E26	Generated unique code cannot be written to the SD card
E27	The SD card has too many bad areas
